Farm News

By J. A. Smith, County Agent

Many Appomattox farmers could increase hay yields from red clover by fertilizing in the early spring. Since this crop is of major importance, proper fertilization would pay on most farms. Use 400-600 pounds of 0-14-14 or 0-10-8.

Fertilization would not be necessary if the corn and small grain used in the rotation received as much as 120-150 pounds of phosphate (P2O5) and 120 to 150 pounds of potash (K2O. Many such rotations do not receive this amount.

Cattle Grubs

The appearance of bumps on backs of cattle at this time of the year is a strong indication that they need to be treated for cattle grubs or warbles.

Eradication of the grubs now will mean less interference with weight and milk productions later in the season, and will also reduce the incidence of these pests propagating in the future.

SAWDUST MULCH UPS GARDEN YIELDS

A sawdust mulch is valuable to the home gardener, according to Dr. Wesley P. Judkins, head of the VPI horticulture department. says sawdust, used as a one-inch mulch around garden plants and rose bushes or shrubs, conserves soil moisture, helps reduce weeds, makes it possible to harvest vegetables or flowers immediately after a rain, and adds organic matter to the soil when is plowed down.

Tests at the VPI horticultural farm have shown that the yield of cucumbers can be increased by over 300%, when sawdust mulch is used instead of clean cultivation. The mulch, in the tests, increased the yield of tomatoes by two-thirds, and of carrots, lettuce, potatoes, and snap beans, by about one-third. The yield of lima beans and sweet corn was increased by about one-fifth and cabbage and peas about one-tenth.

Plant in Usual Way

Dr. Judkins says to plant seed and cover with soil in the usual way. Then put a layer of sawdust about four inches wide and one-fourth inch thick on top of the row. This layer will help to keep crusting of the soil and allow the young seedlings to emerge easily.

When the plants are about two inches high, apply a one-inch layer of sawdust over the entire area between the rows. If voles are more than one inch tall they should be killed by cultivating or hoeing before the mulch is added. If weeds are less than an inch tall, the sawdust will smother them.

Some weeds will continue to grow up through the mulch. Pull these out by hand or cut them off carefully with a sharp hoe. The weeds are easy to pull when the ground is moist after a rain. Replenish the mulch with fresh sawdust with the soil and destroy its value as a mulch.

Nitrogen Necessary

At planting time apply fertilizer liberally to promote vigorous growth. Use about two pounds of a 5-10-5 per 100 square feet, or about 75 pounds of a 5-10-5 per acre. This can be broadcast after the land is plowed. Harrow it into the top of the inches of soil. Use fertilizer supply along the rows, use about 2 pounds per 100 feet of row. A 5-10-5 fertilizer contains about one-half the potash.

Watch the plants carefully during the growing season. If they become light green or yellowish in color, they need more nitrogen. Apply a side-dressing of a fertilizer containing nitrogen, such as nitrate of soda, at the rate of about 2 pounds per 100 feet of row. If you do not have a nitrogen fertilizer, use a 6-pound application of 5-10-5 per 100 feet of row as you did at planting.

Overcome Deficiency

When a heavy sawdust mulch is plowed into the soil, it may cause nitrogen deficiency because of the action of bacteria which decompose the sawdust. An application of nitrogen fertilizer as suggested for side-dressing, but at the rate of 10 pounds per 100 feet, will correct the problem. Apply the fertilizer on top of the sawdust before the land is plowed. If the mulch has been on the garden for a year and is starting to decompose, the regular fertilizer program will probably be enough.

Sawdust is an excellent material for mulching most of all kinds. Most shrubs have small feeder roots near the surface of the soil, which are injured if the ground is cultivated. Using mulch over the rooting zone will eliminate the need for cultivation and promote vigorous growth.

Identical Twin Beef Calves Sought For USDA Research

Identical twin beef calves are wanted for sources for trials at the U. S. Department of Agriculture Research Center at Beltsville, Md.

The scientists there want purebred, grade, or crossbred animals not less than five months old born after December 1, 1957, and before June 1, 1958. Both heifers and bulls are needed. Because of their similar physical characteristics, identical twins are particularly useful in research.

It is hoped that the calves needed can be found in Virginia, Maryland, West Virginia, and Pennsylvania, within a radius of about 250 miles of Washington, D. C.

Producers willing to sell twin calves that meet the USDA specifications should write E. J. Warwick, Acting Chief, Beef Cattle Research Branch, Animal Husbandry Division, Beltsville, Md. An inspector will be sent to check the calves before purchase.

Identical twin calves are rare. Developed from a single cell, they are always of the same sex, react in much the same way, and look very much alike. Characteristic markings may be forteated on the opposite sides of the two animals. Where right and left side markings are reversed, the resemblance is described as a "mirror likeness"

Hi-Fi Pickup Aids Recording of Sounds Made By the Heart

CHICAGO—High fidelity, so precious to the record collector and audio engineer, is also the goal of those who hear and record the sounds of the heart as an aid to the diagnosis of heart disease. At the opening session of an American Heart Association four-day scientific meeting, a new device was described that promises ultra high fidelity in recording, from the outside of the chest, faint heart sounds or murmurs not now detectable by methods in common use.

The device is a special "pickup" developed through the collaboration of a medical scientist, Dr. Dale Groom of the Medical College of South Carolina, and an engineer on the scientific research staff of General Motors, Yro T. Shwonen. It looks something like a stainless steel microphone of small bell. So sensitive is the pickup, said Dr. Groom, that it has been used only in a special soundproof "room within a room," built within the hospital laboratory out of steel and Fiberglass and mounted on shock absorbers.

In this environment, completely noiseless to the ear, murmurs could be heard and recorded from the hearts of virtually all normal subjects (mostly medical student volunteers), said Dr. Groom. These murmurs, the significance of which is not known, were similar to murmurs heard by other investigators in the past, except that from the inside of the heart when a tiny microphone has been maneuvered into its chambers at the tip of a catheter or thin tube. With the new pickup, Dr. Groom pointed out, such faint sounds can now be recorded from the outside of the chest.

Be Prepared for Winter Ailments

TOLEDO — With Asiatic flu an added factor the winter season might be the worst on record for respiratory illnesses.

When illness strikes, most families follow the recommended routine of telephoning a physician, getting the patient to bed, keeping him warm, etc., but too often they don't have in their medicine chest items necessary for aiding the comfort and recovery of the patient.

Surprisingly, many homes do not even have a thermometer.

Other non-medical items which should be handy in every home when common winter illnesses strike are:

An atomizer for spraying nose and throat passages with a recommended medication to relieve congestion and soreness.

A vaporizer to provide steam which relieves coughs and sore throats, helps clear congestion and eases the discomfort of fever periods.

An ice bag for cooling a fevered patient and a hot water bottle to relieve chronic chills.

Alcohol or other antiseptic for rubbing and sterilizing.

Photographic Technique Aids Shock Wave Study

LOS ANGELES—A photographic technique known as a spark shadowgraph, capable of freeze action at less than one-millionth of a second, is making possible detailed studies of air and water shock waves such as those that might follow H- and Hydrogen explosions.

The studies are being carried out under the direction of Dr. Bernhard Cassen of the Atomic Energy Project at the University of California, Los Angeles.

Refraction by air density along the shock wave front causes the wave to appear in photos as a dark line followed closely by a white one. As the shock wave dissipates the line becomes fainter.

Shock waves affect aircraft and ice of skyscrapers, shelter trenches, terrain features and civilian property, the researchers point out. The shock waves were synthesized in the laboratory by exploding wires in a chamber filled with paraffin oil. The bottom of a shock tube, a metal cylinder, is connected to a tube that darts out in front to form a mach line.

Catastrophes Took More Lives in Past 1/2-Year

NEW YORK—Catastrophes—accidents in which dead or injured are counted in groups of 100 or more—took 11,200 lives in the United States and injured more than 1,000 in the first half of this year, the National Safety Council reported by statisticians.

The toll of lives lost was higher than in any other six months of any year since 1947.

This unfavorable record reflects in large measure the heavy loss of life caused by hurricane Audrey, which struck Louisiana and east Texas on June 27. Audrey took approximately 350 known dead and 400 others are listed as missing.

BCIA REPORTS INCREASED ACTIVITY IN PAST YEAR

More and more Virginia beef cattle breeders are availing themselves of the services offered by the Virginia Beef Cattle Improvement Association, reports Dr. T. J. Marlowe, associate animal husbandman at VPI, and secretary of the Association.

Last year performance records were obtained on about 5,000 head in 66 Angus, 44 Hereford, and 4 Shorthorn herds, located in nearly half the counties of Virginia.

Performance records on more than 6,000 calves in the BCIA program over a four-year period were used to study the influence of age, sex, and season of birth of calf, and the age of cow on the preweaning growth rate and type score of beef calves.

Dr. Marlowe says the study showed that bull calves grew about 4% faster than steer calves, and steer calves about 8% faster than heifer calves from birth to weaning.

It also showed that calves born from January 1 through May 31 grew about 5% faster than calves born from June 1 through August 31, and 7% faster than calves born from September 1 through December 31.

County Vehicle Tag Law Is Passed

March Record A Wet One

March, now a month of the past and happily so to those who dislike severe weather, was a time of repeated rains and snowfall. According to W. S. Taylor, official reporter in Appomattox for the Weather Bureau, a total of 4.53 inches of rain and 1.0 of snow was measured here during the month. (Editor's note: we presume the 1.0 inch of snow means liquid measurement after it melted).

There were 16 days during which "falling weather" was recorded during the month, concentrated in the final half of March.

Snowfall early in the month was difficult to "measure" due to winds and drift conditions, making a level tally hard to achieve.

April has arrived with a promise of more seasonable weather conditions, and farmers are hopeful that they can get along with spring plowing and other seasonal chores.

Road Damage Over $6 Million

Winter damage to primary and secondary roads throughout Virginia may cost an estimated $6,500,000 to repair, the State Highway Department said today.

Although the full extent of the damage cannot be determined for possibly several months, preliminary estimates from field engineers put the repair bill for the state's 41,000-mile secondary system at $5,325,000 and for the 7,900-mile primary system at $1,185,000.

By districts, the primary and secondary damage was estimated as follows:

Bristol $437,600, $1,484,600; Salem $143,240, $741,500; Lynchburg $50,938, $277,100; Richmond $58,300, $367,100; Suffolk, $23,000, $353,200; Fredericksburg $122,000, $331,500; Culpeper $190,000, $1,360,000; Staunton $139,000, $409,750. Engineers emphasized that these figures may be revised after weather conditions improve and more detailed inspections can be made.

If the estimates prove to be correct, engineers said, the damage — considered from the point of view of dollars — would be the most expensive in the Departmnet's history. The actual mileage affected, however, is not as extensive as that in 1936 when the repair bill was considerably less due to lower costs of labor and material.

The Department said the cost of these repairs will impose a heavy burden on primary and secondary maintenance funds during the current and next fiscal years.

Field engineers for the Department have been requested to make a further survey of damage and plan for the most economical repairs that can be made in line with the type of road surface and traffic served. In planning secondary improvement work during the coming year, engineers were advised that provision must be made to finance such repairs prior to providing for new work.

The cost estimate for repairing damage to the state's primary and secondary roads does not include the cost of snow removal and ice control which is expected to total about $1,500,000.

During the past winter, the most damage has been done to roads in the northern and western sections of the state. Freezing weather, followed by repeated snow and abnormal rainfall, weakened road bases, which deteriorated when thawing occurred.

Eisenhower vetoes farm bill.

SUNRISE SERVICE

Front Royal, Va.- The Fourth Annual Sundrise Services on the beautiful grounds of Virginia's famous Skyline Caverns, will be presented Easter Sunday morning, beginning at 7:00 o'clock. More than 1,400 attended the services in 1957.

A. H. S. Seniors ready for annual class play.

Concord Ruritan Club is planning for presentation of annual minstrel show at Concord school.

NEWS REPORT OF TOWN MAYOR

To the Citizens of The Town of Appomattox:

You fine people are to be congratulated again for your spirit toward our "Clean-Up" and "Safety" campaigns.

It looks like Spring has at last arrived and we should be having same clear weather. During the inclement weather which we have experienced, it has been impossible for the town employees to pick up and haul off the garbage on Monday and I would like to especially thank all of you citizens for your patience and tolerance concerning the problem during this past winter. It is my sincere opinion that from now on you will find the service of collecting garbage greatly improved.

And again, please let me call your attention to the "State Law" that prohibits the dumping of trash and garbage along the highway. During the past few months we have had many violations of this law along the road leading to the Town Dump. After talking with Sheriff David T. Robertson, I understand that he is going to start enforcing this law, so I plead with you who have been guilty in the past to please refrain from any further violation of this "State Law" in the future.

In the event anyone is planning to start construction of a new residence or place of business within the corporate limits of the town anytime in the future, please present a Permit to the Council before construction begins in order to straighten out any sewer problems that you may be faced with.

With Spring arriving, let's everyone exert every effort we have to clean and beautify our town and also remember we want to make Appomattox a safer town in which to live and drive.

Your counsel and advice on all public matters is welcomed at all times.

Sincerely,
C. T. Moses, Jr.,
Mayor, Town of Appomattox.

Notice From Sheriff

It has been called to my attention by the Town of Appomattox, and I have been requested by them to enforce the State law in regard to throwing trash along the road leading to the new Town Dump.

This is to inform the citizens that it is a violation of the State law, with a fine up to $500.00 to throw trash anywhere near the road leading to the Town Dump other than the Dump itself, which is located about 500 yards from the main road.

I ask the citizens to please cooperate in regard to this law.

—David T. Robertson, Sheriff
Appomattox County.

SPECIAL SERVICE AT MEMORIAL METHODIST SUNDAY EVENING

The Chapel Choir of the Memorial Methodist Church, Miss Harriett Holley, director, and Mrs. Murrell Ferguson and Miss Peggy Godsey, organists, will present the Easter Day Evening Service in the Church Sanctuary at 7:30 o'clock.

The theme of the service will be, "Hymns of The Cross," will be beautifully and inspirationally presented with the use of the beloved hymns of the Cross and Color Slides. The richly-colored slides painted by famed artists depict Jesus Nailed to The Cross, The Thorne-Crowned Christ, The Three Cross of Calvary, Faces Around the Cross, The Ascension Scene, and the Challenge of The Old Rugged Cross.

Assisting the choir in the presentation of the Special Easter - Evening Service will be the Interpreter, Mrs. Mary Alma Hudson, the Scripture Reader, Miss Ruby Jones, and Hymnologist, Miss Lucy Perdue.

All members and friends of the Church are urged to be present for this special Easter Service.

Born again modifies policy on German unity.

Play safe — drive carefully:

Baseball practice at A. H. S. has been slowed by wet weather, but is now in full swing.

Play safe — drive carefully.

Police Seeking Robbery Clues

Police officers working for a solution of three daring robberies in Appomattox last Thursday night or early Friday morning, are of the opinion that the local break-ins were part of a series of similar robberies over the state. A number of other cases have been reported that bear much similarity to the Appomattox jobs.

The thieves entered the Poe Hardware Company, and made off with a large number of appliance items and hardware stock. A complete inventory of missing items is not available, but it is held likely that up to $2,000 worth of merchandise was taken from this firm. Also entered was J. E. Jamerson & Sons, and Grinels Motor Co., where typewriters were the principal missing items. Very little cash was found in the break-ins.

Sheriff David T. Robertson is continuing his efforts to follow down every clue, and is of the opinion that tire prints found here correspond to prints found at scenes of robberies both before and since the Appomattox case in other towns and cities He also noted that the items taken were of a similar nature.

Red Cross Canvass

The canvass of the Town of Appomattox for Red Cross members and funds that was originally set for March 28, has been rescheduled to now set for Saturday, April 3. According to Frank McCann, the chairman of the 1958 Appomattox County Red Cross Campaign for funds, you may expect someone to come calling at your door tonight to ask you to help your neighbor and YOU through Red Cross programs. You are asked to be generous.

PROMOTIONS IN STATE HIGHWAY DEPARTMENT

Joseph V. Clarke, assistant construction engineer, has been named secondary roads engineer to succeed S. D. Crute, who died March 4, the State Highway Department announced today. The appointment became effective April 1.

In his new position, Clarke will be responsible for the administration of the state's 40,000-mile system of secondary highways.

A native of Midlothian, Clarke, 54, attended public schools in Richmond and received his engineering training at Virginia Military Institute. He was employed by the Highway Department as a draftsman in 1925 and in the following year became a rodman on a survey party. After serving successfully as an instrument man, chief of party, and inspector on construction projects, he was promoted in 1932 to resident engineer at South Hill. In 1937 he was transferred to Staunton and four years later moved to Accomac. He left the Department in 1942 on military leave.

After being discharged from the Army two years later with the rank of lieutenant, Clarke returned to the Highway Department and was assigned to the Division of Organization and Public Relations. He was transferred to the construction division in 1946.

T. Bernard Talbott, resident engineer at Fairfax, will replace Clarke as assistant construction engineer. Frederick L. Burroughs, resident engineer at Leesburg, is being transferred to Fairfax to replace Talbott; and George P. Bozel, resident engineer at Culpeper, is being transferred to Leesburg to replace Burroughs. The Department said the replacement to fill the position at Culpeper will be announced later.

SHEARING SCHOOL

A sheep shearing school will be held on the farm of J. C. Miller in Charlotte County on April 10. The school will be conducted by George Allen, Sheep Specialist. Wool producers interested in attending may meet at the county agent's office at 8:00 A. M., on Thursday, April 10.

U. S. Navy Commander Robert E. Peary became the first living person in world history to reach the top of the world when he planted the "Stars and Stripes" there April 6, 1909.

RECEIPTS FROM PARKING METERS

It appears that collections from the recently installed parking meters in Appomattox have hit a constant figure of slightly over $50.00 per week. The Town installed 50 parking meters on February 24, and 17 more were put into use March 1.

Collections, on a weekly basis at the end of weeks were:

March 1— $62.00.
March 8— $55.00.
March 16— $52.00.
March 22— $56.00.
March 29— $51.00.

RALPH INGE IS SECOND IN F. F. A. CONTEST

Ralph Inge, winner of the Robert E. Lee Chapter and Hub Federation Public Speaking contest, placed second in the Southside Area F. F. A. Public Speaking Contest, which was held recently at Gretna. This was the third of six contests that is held to determine the national winner of the Public Speaking Contest. Ralph's speech was entitled, "Atoms for Agriculture," which discussed the use of atomic energy in the promotion of better farming methods.

First place was won by A. L. Yeattis III, with his topic, "The Modern Farm of Tomorrow." He is a member of Climax Chapter of Future Farmers of America, in Climax High School, Glen Good, of Halifax, placed third.

The six contests which determine the National Public Speaker are Chapter, Federation, Area, State, Regional and National. The State contest is to be held June 16 - 19 at the State F. F. A. Rally at Blacksburg, Va.

Demonstration Club Schedule

Home Demonstration Club schedule for week of April 7-11:

Tuesday, April 8.- Clover Hill Club will meet at 7:30 P. M. with Mrs. G. P. Morris.

Thursday, April 10.- The Stonewall Club will meet at 10 A. M. at the Community Center. Members will bring a covered dish. Lunch will be served at 11:30 A. M.

WOMAN'S CLUB NEW MEETING DATE

The next meeting of the Woman's Club of Appomattox will be held on April 14, instead of Easter Monday, the regular date, it was announced today by Mrs. H. Y. Spencer, Club President.

SWINE MEETING IS SCHEDULED

A number of Appomattox farmers have become increasingly interested in producing hogs. The marketing of corn through livestock usually pays greater returns than selling the corn on the open market. Therefore, there is a very definite place for hogs on farms in this county. Knowing how to stay in the swine business when hog prices are down is perhaps the real secret of successful operation. Robert Godsey, VPI Swine Specialist, will discuss breeding and management with interested growers at the Appomattox Court House on Monday night, April 7, at 7:30 P. M.

SPANISH CLUB

On March 31, the Spanish Club held a special meeting to encourage students to take Spanish. The president, Laura Carson, conducted the meeting.

The program consisted of a quiz given to the future students to demonstrate how easy Spanish really is; songs, reasons for taking Spanish, and some history of South America by Virginia Shouse, who plans to go to Peru in April.

There was a good attendance, and it is hoped that these students will plan to include Spanish in their schedule next fall.

—Clarence Grishaw, Reporter.

Research hints fat in arteries can be halted.

Subscription rate: $2.00 a year: payable in advance.

After listening to several delegations and receiving resolutions asking that provision be made to grant a salary increase to public school teachers, the Appomattox County Board of Supervisors yesterday voted to impose a flat $10.00 license tax on motor vehicles, and make the money received from this source available to the School Board for teacher salaries and other school purposes.

Since 1958 license tags are already on sale, the county license tag will not go on sale until March 15, 1959. It is understood that the county will turn over the yield from the tags, when received in 1959, to the school authorities, and therefore any salary increase for the 1958-59 school session would probably be payable in a lump sum near the end of that school term.

The proposal would be to increase the salaries of teachers holding degrees by $200 a year, and the salary of teachers without a degree $100 a year. A rough estimate is that such an increase would add approximately $18,000 to the school budget.

It is expected that approximately 4,000 motor vehicle licenses will be sold in the county this year. Last year is was about 3,950.

The action of the Supervisors provides for the county to rebate to the Town of Appomattox the amount of the town license tag, which is now $3.00, but which will be $5.00 for 1959.

Beginning with 1959, vehicle owners in the Town will use the county plates at a cost of $10.00, same replacing town tags.

Appearing in behalf of the proposal were delegations or resolutions from the American Legion, the Ruritan Club, Lions Club, Appomattox high school and elementary school P.-T. A., and the Pamplin P.-T. A.

The Supervisors are said to have felt that their choice as to increasing teachers salaries lay between a general real estate and personal property tax increase, and the county motor vehicle license. The latter device is being used by an increasing number of Virginia counties to meet larger budgets. Therefore, the decision of the board will leave the general county tax rate the same as at present.

Yesterday's meeting of the board had been announced for the purpose of adopting the county budget for the fiscal year July 1, 1958 to June 30, 1959. After handling the above action, the board passed the budget.

In other action taken by the Supervisors yesterday, it was agreed for the county to pay one-fourth of the cost of resurfacing one-half mile of road leading off Route 604 to the Town of Appomattox Dump. This road is now often impassable. It is estimated that the road can be placed in condition for something around $1,600.

The Supervisors also accepted the high bids for the used vehicles in the Sheriff's Department. Car No. 7 was sold to the high bidder for $950.00. Car No. 8 was sold to the high bidder for $1,026.

Young Farmers Study Highway Laws

"Laws Concerning Farm Vehicles and Machinery on the Highways," is to be the topic for the Appomattox Young Farmers group when they meet Tuesday night. All interested farmers in the area are invited to attend this meeting, which will be held in the Vocational Agriculture building at Appomattox High School. A member of the Virginia State Police will be present to lead the discussion on this topic. The meeting will begin at 8:00 P. M., on Tuesday night, April 8.

The Young Farmers are concerned with the number of highway accidents occuring which involve farmers and their equipment. They are also concerned with learning just what laws do apply to farmers in their use of the highways to transport their machinery and equipment. They hope to have these facts brought out in the discussion, and would like to have all interested farmers in the area to share in this meeting with them.

BUCKINGHAM CENTRAL GIRLS' CHORUS

The Buckingham Central Girls' Chorus has been practicing for the Easter program, to be held April 4, at the school.

The boys will also appear on the program.
